Egan Visual Production contributes near-zero waste

As part of the company's ongoing commitment to sustainability, Egan is pleased to announce that byproducts of the manufacturing process contribute nearly zero waste to landfills. Instead, this material is:

1. Reduced through vigorous Quality Assurance procedures that keep non-recoverable production waste to a minimum
2. Recycled, through streaming programs inside the factory
3. Reused: What little is left is diverted to fuel for electricity production, a clean energy source (EPA). This powers the equivalent of 6-7 average homes.¹

Egan Visual has been certified by UL™ to have established and to maintain an Environmental Management System, and is registered to the ISO14001:2004 standard.

-EOM-

¹ 1 EFW converts energy at a rate of about 5,000 kWh/10t. The average home uses 920 kWh/month, (US Department of Energy Information <http://tonto.eia.doe.gov>)
